

A | Inclusive campaign occupation

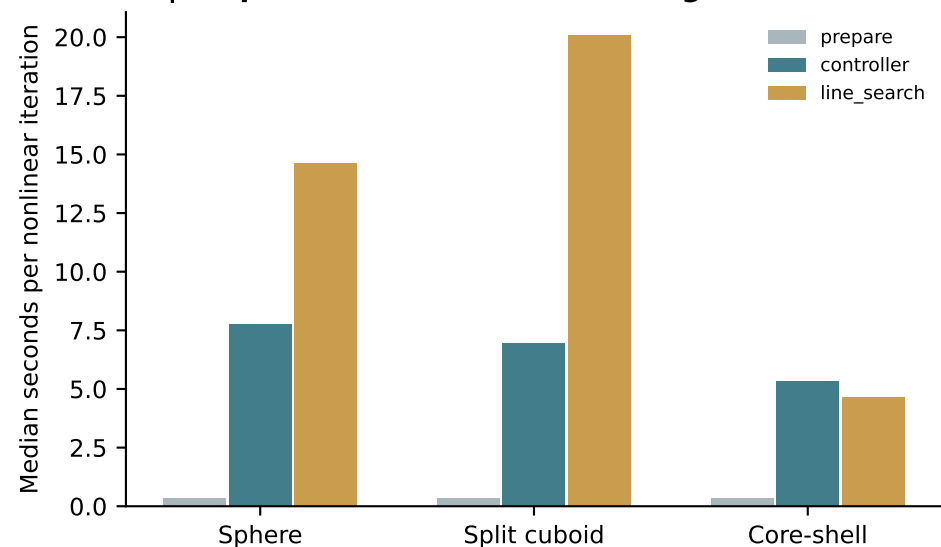

B | Sampled GPU memory

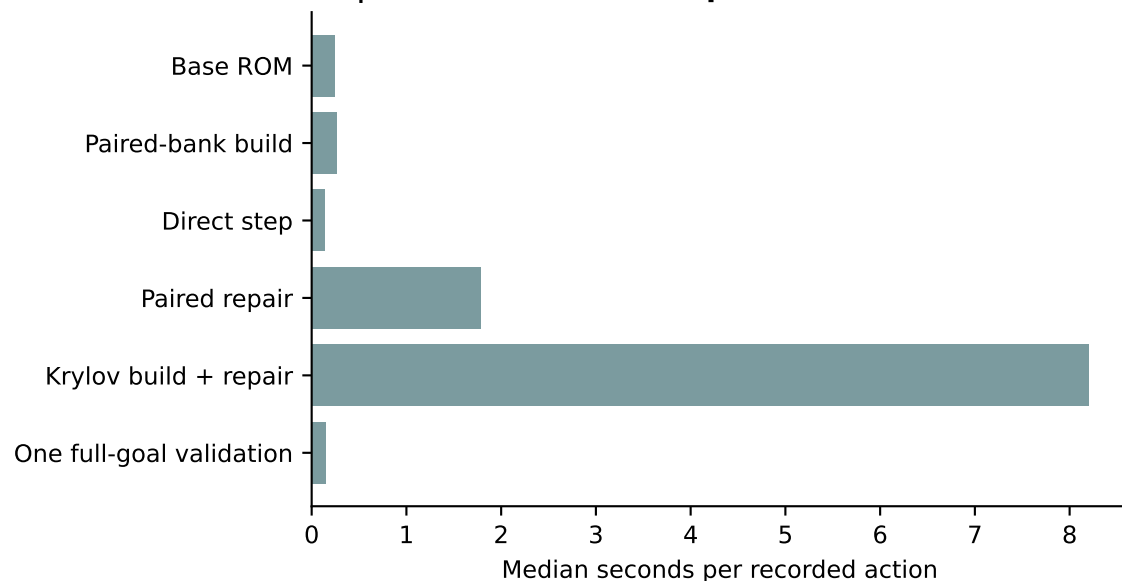

Bar: sampled p95; diamond: sampled maximum.
One-second sampling can miss shorter peaks.

C | Representative full-model stages

Zero noise, B0 only; coarse phases, no paired comparison.

D | Local candidate / repair actions

12 frozen-anchor files; component medians are not additive.

Historical A12 same-quality E5: paid paired warm start / matched PCG = 1.416 [1.330, 1.445] (anchor-inclusive); separate campaign and outcome. R1 sharp B0/static timings are not compared here.
