

Saved nonlinear reconstructions: three complete paired endpoints

All slices: $z = -0.0625$; dashed line and profiles: $y = -0.0625$. Shared color scale within each row.

$E_{\chi}^{3D} = \|\chi - \chi_{true}\|_2 / \|\chi_{true}\|_2$: audited full-volume complex error, not slice error.

Fourth planned pair (asymmetric voxel): no complete pair; exchange failed before update 18, receiver only not run.
